

# Avast Free Mac Security

Speed, functional design, real-time operation and ease of use. The same reasons people buy Mac computers also apply to our Avast Free Mac Security. Macs were more immune to malware threats in the past, but their increasing popularity and greater market share have made them a hot new target for hackers. Now you can be assured that no virus will take away your control.

## KEY FEATURES - AVAST FREE MAC SECURITY

### ANTIVIRUS AND ANTI-MALWARE

We continue to improve the world's most trusted antivirus and anti-malware engines to keep you better protected. We send security updates the size of a text message several times an hour to keep your protection completely up-to-date.

### FULLY CUSTOMIZABLE MALWARE SCANNER

Check your computer for viruses, malware and Potentially Unwanted Programs (PUPs) by analyzing file content. You can scan your whole system, including time machine backups, removable drives, and network drives, or specify which files and folders to scan.

### VIRUS CHEST

Safely isolate files and stop them from running, without affecting computer performance. All threatening files detected by the scans and filesystem shield are moved to the Virus Chest. Files incorrectly labeled as threatening can always be restored.

### FILE SYSTEM SHIELD

Scan files and applications automatically to stop them from running or opening when anything suspicious is detected. Downloads from file-sharing and instant messaging programs are also scanned automatically.

### MAIL SHIELD

Scan incoming email messages and their attachments for viruses and mark them as clean or infected. Malware attachments are removed before messages are delivered. You can enable scans of secure server connections or exclude trusted mail servers from scanning to optimize connection speed.

### WEB SHIELD

Protect yourself from hacked websites contaminated with malicious scripts and infected files without slowing down your web browsing. Web Shield provides continuous, real-time protection.

### SECURE HTTPS SCANNING

Web Shield can also scan encrypted connections and HTTPS scanning prevents nearly 2 million users from downloading malware from infected "secure" websites every month. You stay protected because the HTTPS connections are still encrypted like they were before the scan. Secure, trusted sites such as your bank can be excluded from HTTPS scanning.

### AVAST ACCOUNT INTEGRATION

Manage all of your protected devices from within the Avast Free Mac Security using the My Avast Account console. Here you can check the status of your devices and add new ones. You can also get points redeemable for badges, free products, and upgrades by recruiting friends and using the product.

### ONLINE SECURITY PLUGIN

Chrome and Firefox users can use this community-powered, website reputation and ratings plugin that warns you about phishing sites, displays website ratings next to search results, and automatically corrects mistyped URLs to direct you to legitimate sites.
